

REMARKS

Reconsideration and allowance of the above referenced application are respectfully requested. Claim 12 stands objected to as being in improper multiple dependent form. In response, claim 12 is amended into proper form.

New claim 22 as been added to recapture the subject matter of the alternative dependency of claim 12.

Claims 1-11 and 13-16 stand rejected under 35 USC 102(b) as allegedly being anticipated by Haynes. In response, claim 1 have been amended to recite an active matrix type light emitting display device. Claims 5-8 have been amended to clarify the constitution of a light emitting layer with the first layer having an electron transport property, and a hole transport property; and a second layer that has a luminescent material. The first layer is formed on the anode and cathode and the insulator and the second layer is formed on the first layer. This emphasizes the patentable distinctions over Haynes, who does not teach or suggest this combination. As such, each of claims 1-8 are completely patentable over Haynes, and thus obviates the rejection.

Claim 13 recites that the distance between an anode and cathode is 200 nm or less. It is respectfully suggested that Haynes does not teach or suggest this feature. Claim 14

RECEIVED
JUN - 5 2003
TECHNOLOGY CENTER 2800

requires that the angle formed by at least one of the side surface of the cathode and the anode and the surface of the insulator is between 30 and 90 degrees. It is respectfully suggested once again that Haynes does not teach or suggest these features.

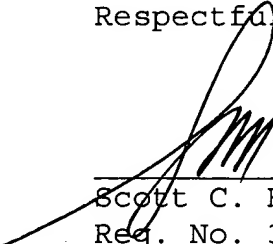

The newly added claim should also be allowable for similar reasons to those discussed above with respect to the previous claims.

In view of the above amendments and remarks, therefore, all of the claims should be in condition for allowance. A formal notice to that effect is respectfully solicited.

Please apply \$110.00 for the one month extension fee and any other charges or credits to Deposit Account No. 06-1050.

Respectfully submitted,

Date: 05/30/03
